

INTELLIGENCE SOFTWARE LLC RUSSIA

Software development company for geographic information systems (GIS)

Company overview

Intelligence Software LLC Russia was established in 2007 as an highly innovative developer of software and spatial data for geoinformation systems, cartographic production and GPS-, GLONASS- trackers for navigation. The software offered by the company, is in demand in the fast growing field of geoinformation technologies. The solutions for imaging and processing spatial data, have innovative design and large functionality and let the consumer adjust and integrate it with all the popular IT brands. Intelligence Software LLC is looking for distributors for selling its products in Germany and for partners for joint development in the geoinformation systems market (joint venture creation and reciprocal production). The company is also open to discuss merger and exchange of shares.

Business description

The use of electronic maps and spatial data displayed on them is increasing every year and requires the technology to effectively work with them. Our software, hardware tracker and spatial data can best be applied maps and spatial data of users on the Internet, portable devices and dvd-disks. Additionally Intelligence Software LLC deals with R&D for effective and powerful collecting data for presentation on the map. Results of R&D are supplied mainly to government and to various companies of Russia.

Major products and services

1. Software: Innovative geo-information system, functioning identically on the Internet, portable devices and compact disc. It is used for processing spatial data, imaging of multimedia data, documents of different formats, stereoimages, orthophotographs for accurate calculation of depth, volume, distance and square. It is applicable for creation of information systems of situational, dispatching, analytical, monitoring offices, call-centers, corporate web-sites etc. It may be integrated with a large number of database management systems. The current version is ready for selling to end users.
2. Spatial data for any territory represented by geo-databases or cartographic production (information system on a compact disk or any other carrier, wall map, relief map, atlas, encyclopaedia).
3. Equipment: GPS-, GLONASS- tracker for monitoring navigation, in retail - or OEM - package with firmware and software for imaging gathered data.

Offer

Technical & Production, Reciprocal production, Financial Co-operation, Joint Venture, Merger or exchange of shares

Request

Commercial Co-operation, Trade Intermediary services (agent, representative, distributor), Financial Co-operation, Joint Venture, Merger or exchange of shares, Technical & Production, Reciprocal production

Requirements to partner

Any company active in Production, Services, Trade (Buying/Selling). A company of any dimension, experienced in the sphere of geoinformation systems and able to adapt the Russian company's production to its country's local market and (or) sell it there (localisation, adaptation, sells, technical support, education, implementation).

The expected input is the sale of the Russian company's production and (or) constructive critics in order to adapt the production to the local market. Joint development of products in the sphere of geoinformation systems is also possible.

Facts
